ABSTRACT

During a slot machine game, game effects are also displayed on a liquid crystal panel **39d** provided in a reel display window unit **39**, and thus the liquid crystal panel **39d** serves as a new machine component for performing game effects. Therefore, new effects for the game can be performed on the liquid crystal panel **39d**, which facilitates maintaining the novelty of game effects. Furthermore, since the reel glass base **39b** is black-colored, any light incident on the reel glass base **39b** is not easy to be reflected on the liquid crystal panel **39d**. Consequently no light incident on the reel glass base **39b** is mirrored into the liquid crystal panel **39d**.
